

Camels

A camel can go for a long time without water, but it does not store water in its hump. It stores fat in its hump. Fat keeps you warm, but camels live in deserts, which are very hot. They do not want to be warm, so they store fat in their humps.

Arabian camels have one hump and short hair. Bactrian camels, which come from Asia, have two humps and long, thick hair, because winters can be cold in the Asian deserts. All camels have long eyelashes to keep out the sand.
